Champion your cause

Infinite 3D boast an extensive and diverse international portfolio of 3D visualisation projects and architectural photography commissions in the sports sector, including prestigious venues for football, tennis, cricket and athletics.

One of our first major commissions, in 1998, was the proposed all-new stadium for Liverpool Football Club, designed by AFL Architects. We worked on the proposal, in Stanley Park, for a number of years together with a proposal for the extension to the current ground more recently in 2012.

Developing a deep understanding of the unique challenges of sports-venue design, we have visualised and photographed training academies, new stands and complete stadia for a host of international brands for the best part of twenty years, including Manchester United, Chelsea, Wolverhampton Wanderers (Wolves), Southampton, Everton and Warwickshire CC (Edgbaston).

Our international work includes visualisations in Qatar, China, Azerbaijan, Turkmenistan and photography in Ireland and South Africa for the World Cup 2010.
